DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claim 1-15, are drawn to computing a phase or time difference between two signals, classified in class 702, subclass 72.
- II. Claims 16-27 are drawn to an optical measurement system, classified in class 73, subclass 1.45.

The inventions are distinct, each from the other because of the following reasons:

Invention I and II are related as combination (invention I) and subcombination (invention II). Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particular of the subcombinations as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)).

In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because Invention 1, the combination as claimed does not require an optical receiver outputting a measured signal having a clock cycle (invention II) has separate utility such as a measuring a clock signal.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Applicant in replying to this Office action must make affirmation of this election. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement maybe traversed (37 CFR 1.143)
